

MANAGEMENT SYSTEMS

ERREKA CONTROL SYSTEM

At ERREKA Automatic Doors, we aim to adapt to the needs of our clients by seeking to offer an added value for the end user in the management of their automated entrances. In this respect, and as a result of the innovation process, a core strategy at ERREKA, we offer ERREKA Control System, which is an automatic door management system enabling **up to 100 automatic doors to be controlled from one PC.**

The **functions** that can be controlled include:

- **Controlling all selector functions:** door open, door closed, exit only, two-directional automatic and partially automatic.
- **Modifying the standard parameters** of the doors: higher or lower speed of opening, closing, ...
- **Establishing door opening and closure programming.**
Example: opening of all doors at 8am and closure at 10pm during the week and closure of all doors at weekends.

This management system is especially designed for buildings where there are many entrances and **centralising** these brings major advantages in terms of **control, security and saving on time** and movement, such as in hospitals, airports, shopping centres or public buildings.

The system is supplied with an easy-to-operate **installation CD** and it is particularly intuitive and user friendly, making it very simple to use.

Within our management systems, we also offer a wide range of different access controls in order to meet our clients' needs as fully as possible.
