

## SLIDING DOORS

### MORDAZA model

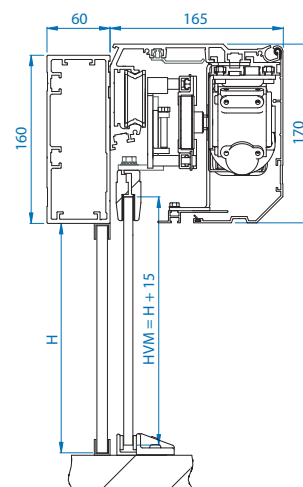

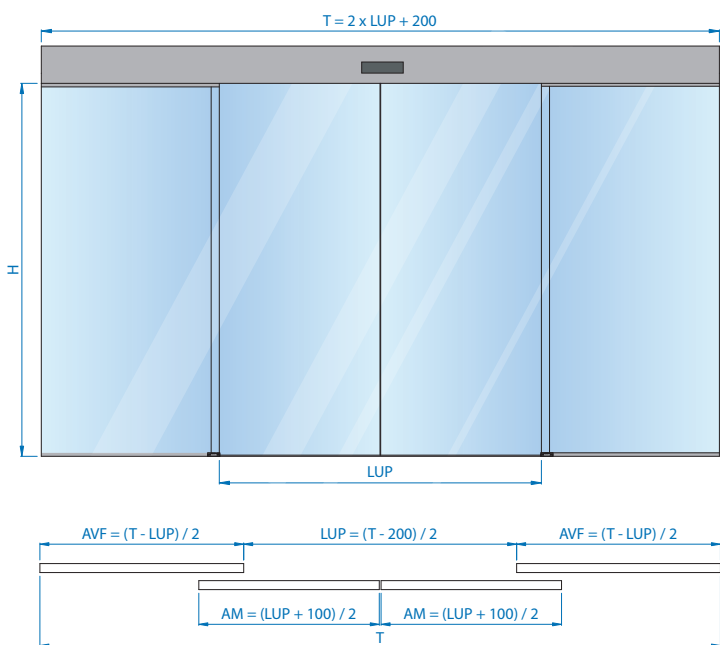

The MORDAZA model allows for maximum visibility of entrances as it is the model with the least frame and thus the one with the most bare glass. This model therefore gives entrances an avant-garde and elegant look.

Due to a non-slip material located inside the clamp, this model ensures a secure grip (up to 150kg per leaf).

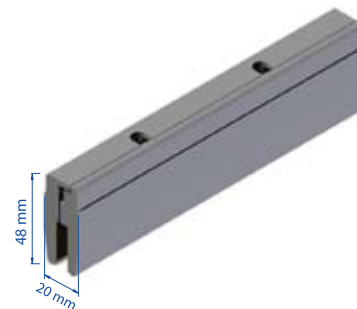

The mordaza model also offers the advantage that there is no need to drill or work the glass, as the clamp supports it through pressure, making it easy to install or replace the glass.
