

SLIDING DOORS
PINZA model

The PINZA model lends the maximum elegance and visibility of the interior to entrances. It is designed for doorways where, for aesthetic reasons, frames must be avoided and bare glass is the best option. This model is ideal for interior entrances and for offices in particular.

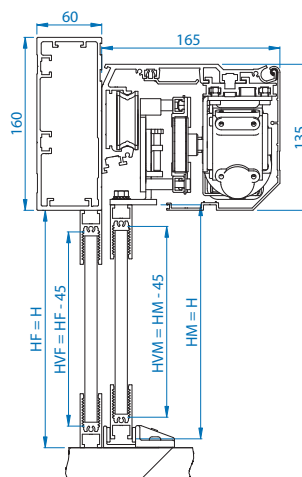

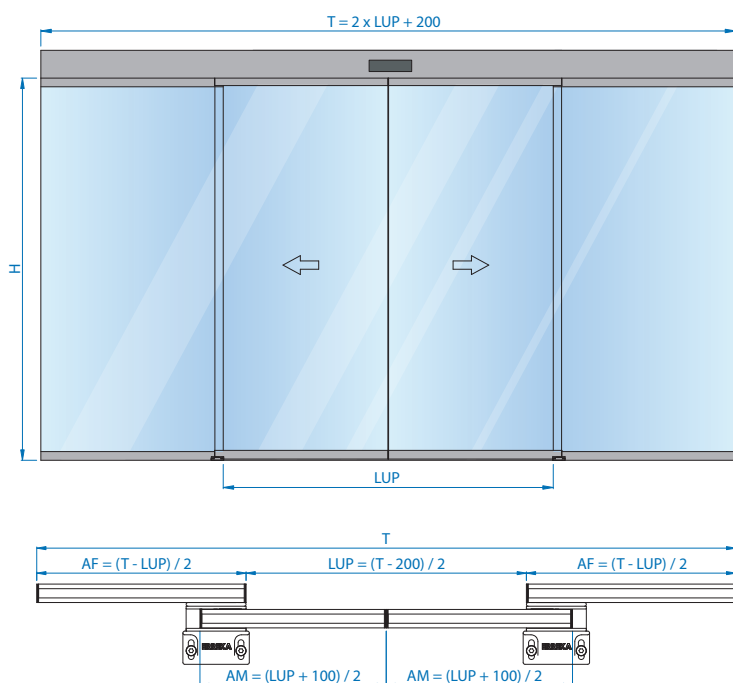

2 installation solutions are available: with a top and bottom frame or with a top frame and bare glass at the bottom.

Panes from 4+4 to 6+6 can be installed and they are secured with special silicone.

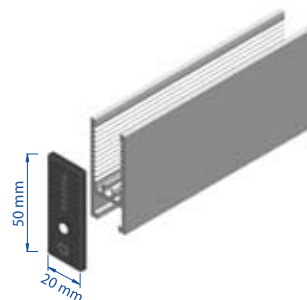

The model is supplied with a specially designed plastic cover to ensure that the leaves meet smoothly, leaving a small gap to prevent the panes from knocking against each other and enhancing the look of the clip.
